Senior Design Task List   Adam White
Student Loan Calculator

Goal: Build a student loan calculator which enables
students to make a plan for debt repayment.

Tasks:

Research repayment options, what income levels for qualification?
Build HTML form for inputting a loan
Submit button on Input Loan form - event handler.
    Adds loan details to loan list object in data handler.
Build HTML form for inputting other info
Submit button on Other Info feeds data to data handler
Build Data Handler struct which stores data.
Make a heuristic for scenarios. (used in queue)
Research deferment on different plans
Implement 4 nested for loops that vary the: repayment options,
    total monthly payments, refinance options, and debt strategy.
    For building scenarios.
Build HTML GUI that compares scenarios side by side
In scenario comparison, plot graph/timeline that shows the
    amortization schedule.
Write information text displays that explain to the
    user certain terms and how loans work.
